

New Hampshire Housing is pleased to provide this “Lead-Safe Housing Registry” to you. This registry is a listing of single/multi-family homes, duplexes, and apartments that have received a professional lead service of some kind. This could be one that identified lead paint and/or one that has removed lead paint hazards. These services have been performed by state certified lead professionals or companies. We trust it will help you to make an informed decision prior to buying or renting a home. This list currently has 970 lead-safe units as of October 1, 2021.

IMPORTANT ADVISORIES

Important Advisories The units listed in the “Lead-Safe Housing Registry” were deemed lead-safe based on a lead evaluation in the month and year shown. “Lead-safe” means that there was no deteriorated lead-based paint, no lead-contaminated dust, and no exposed lead-contaminated soil identified at the time of the lead evaluation. This does not mean the property is “lead-free” as lead-based paint or lead in the soil may remain. Lead hazards may be created as a result of normal use and changes to the structure. Likewise, hazardous lead components may be removed as structures undergo renovations, such as new windows.

On-going lead safety requires the owner to safely maintain paint coatings and soil covering and to use lead-safe work practices in maintaining or repairing the unit. Prospective renters or buyers should check with the owner to see if these practices have been followed. Another assessment may be needed by state certified professionals since the original activity was performed on a home. These individuals can be located at <https://www.dhhs.nh.gov/dphs/bchs/clpp/documents/contractor.pdf>

Please keep in mind, this list of “lead-safe” housing units (at the date indicated), does not mean that the units listed are vacant or available at this time. Also, other units at a given property that are not listed here may or may not be lead-safe.

New Hampshire Housing makes no warranties as to the current condition of the property. Normal deterioration or activities of the owner, tenant, or others may have created lead hazards since the original lead hazard evaluation date.

OTHER IMPORTANT LEAD-BASE PAINT INFORMATION

Other Important Lead-Based Paint Information A building can be considered safe from lead hazards even if some of the painted surfaces still contain lead paint. If these surfaces are in good condition and are well maintained, the lead paint should not cause an exposure to you or your children. However, in some building components with friction surfaces, such as windows, doors, stair treads and cabinet drawers, a lead hazard is still present since these surfaces are subject to rubbing. This rubbing action can release enough lead paint dust to poison a child.

Remember, the older the property, the more likely it is that lead paint will be found. Properties built after 1960 are less likely to contain lead paint than those built before 1960. Nearly all properties built before 1940 contain some lead paint. The only way to know for sure is to have your home tested by a state certified professional <https://www.dhhs.nh.gov/dphs/bchs/clpp/documents/riskassessor-inspector-list.pdf>. Lead poisoning of a child is a serious health threat and the effects will last a lifetime, so take the time to ensure your home is lead-safe for your family or tenants.
