INTRODUCTION

The **Utility Allowance Schedule for New Hampshire** is published annually by New Hampshire Housing with the state's utility allowances for the stated calendar year. These include estimated cost allowances for space heating, water heating, cooking and miscellaneous electric use (lights, refrigeration, etc.). While the data is primarily used for the federal Housing Choice Voucher Program, it also can be used to determine gross rents for units where the tenant is responsible for utilities.

A survey of energy suppliers is conducted by New Hampshire Housing to obtain current utility rates for the state. These rates, together with the standard physical consumption allowances, are used to calculate utility allowances in dollars for the regions of the state.

Table 1 shows current utility rates and includes current consumer costs for electricity, natural gas, bottled gas, and fuel oil. Propane and fuel oil rates are gathered from a variety of suppliers throughout the state. As a result of electric utility deregulation in NH, rates are determined by surveying electric companies that provide electricity within the state. A weighted average is used to calculate the electric rate and the natural gas rates within the state.

Table 2 shows physical consumption allowances for cooking, miscellaneous electric use and water heating. These allowances are made according to the number of bedrooms in the unit.

In order to accurately calculate the monthly heating allowance, the state is divided into four heating zones. A base of 7,500 degree days was established and is adjusted by a series of multipliers to account for different heating needs within the four zones (**Table 3**). These multipliers are then applied to the physical consumption allowances for 7,500 degree days (**Table 4**) to obtain the consumption allowances for each of the four zones within the state, by property type and number of bedrooms.

Multiplying the physical heating allowances by the rates given for the main energy sources results in monthly dollar allowances for heating for each zone, by property type and number of bedrooms (**Tables 6, 7, 8, and 9**).

CALCULATING ESTIMATED NON-HEAT UTILITY COSTS (COOKING, HOT WATER, AND MISCELLANEOUS ELECTRIC)

These allowances are established for the entire state.

1. Use **Table 5** to obtain the allowance for cooking, hot water, and miscellaneous electric.
2. Determine which utility costs (cooking, hot water, misc. electric) are not included in rent.
3. Determine the number of bedrooms for the unit.

Monthly charges established by the utility are included in the allowances in **Table 5**. There are additional meter charges for natural gas if it is used for hot water but not for heat, and if electric heat is used for hot water. Please read the table's footnotes and add the applicable meter charge.

CALCULATING ESTIMATED UTILITY COSTS (HEAT)

Heat allowances are dependent upon the location, housing type, and size of housing unit as well as the fuel type used to heat the unit. Refer to **Tables 6, 7, 8 and 9**, based on location of home.

GROSS RENT CALCULATION

To determine gross rent for the unit, add together the contract rent, non-heat utility allowances, and the heat allowances.

¹ In 2024, the weighted average non-heating gas service charge is \$18.19. It must be added to the allowance for natural gas cooking or hot water if natural gas is not used for heating.

² Included in the Miscellaneous Electric dollar amount is a weighted average customer charge of \$16.08 per month.

³ Included in the Hot Water Electric dollar amount is an additional customer charge of \$3.51 per month.
